Profile Summary :-

- 3.4 years experience in Informatica MDM SaaS (IDMC) and Informatica Intelligent Cloud Services (IICS).
- Worked on Mapping, Mapping task, Task flows in IDMC
- Passing the values from one mapping task to other mapping task.
- Worked on different connectors like S3, Oracle, Flat File, Rest V2 and Teradata Connectors.
- Worked on Input Parameter and In-Out Parameter and Flow run Order.
- Worked on different type of tasks like Mapping, Replication and Synchronization and Power Center tasks
- Involved in improve the performance of IDMC Jobs using transformation wise and partition.
- Worked on dynamic files creation based on client requirement in IDMC.
- Developed and optimized Snowflake SQL queries for data extraction, transformation, and loading operations.
- Strong knowledge of Master Data Management (MDM) concepts, with a proven track record of delivering robust and scalable MDM solutions.
- Managed master data lifecycle including creation, update, and maintenance of **customer and supplier records** ensuring data accuracy and compliance with governance standards.
- Configured and supported name and address **standardization processes** to improve data consistency across systems.
- Worked on **match and merge rules** to identify duplicate records and consolidate **golden records within MDM environment**.
- Applied **survivorship rules** to ensure the most reliable and accurate data is retained during record consolidation.
- Performed **data cleansing, validation, and enrichment activities to improve overall data quality**.
- Developed and executed **SQL queries (joins, aggregations, group by)** for data analysis, validation, and issue troubleshooting.
- Developed complex **SQL queries using joins, group by, and aggregation functions** to analyze large datasets and support data validation activities.
- Tuned SQL queries by optimizing joins and **filtering conditions to improve performance during data processing**.
- Supported MDM development activities including data onboarding, rule testing, and defect resolution.
- Collaborated with business and technical teams to resolve data discrepancies and improve data governance processes.
- Monitored data quality metrics and performed root cause analysis for **data issues**.
- Documented data **mappings, business rules, and operational procedures** for MDM processes.

- Experience with Informatica Enterprise Data Catalog (EDC) and Axon Data Governance
- Proficient in Informatica Cloud Data Quality (CDQ) on IICS, and well-versed in Data Warehousing principles and methodologies.
- Solid understanding of end-to-end business processes, with practical experience in development and solution implementation.
- Extracting the source data from AWS-S3 Buckets and Local files and loaded into Snowflake.
- Created an external stage in Snowflake to define the connection to the S3 bucket with S3 storage integration.
- Experienced in collaborating with cross-functional teams including Deployment, QA, and Testing teams to streamline the development lifecycle.
- Demonstrated ability to effectively interact with clients and stakeholders, gathering and translating requirements into technical solutions.
- Fast learner and self-motivated, with a keen interest in staying current with emerging technologies and industry trends.
- Skilled in coding, testing, debugging, documentation, and deployment of complex data integration and MDM programs.
- Experienced in designing and implementing Type 1 and Type 2 Slowly Changing Dimensions (SCDs) based on business needs.
- Adept at performance tuning and resolving bottlenecks across source, target, and transformation levels to optimize ETL workflows.
- Developed and executed comprehensive unit test cases to validate source code accuracy and data integrity.
- Familiar with Informatica object deployment processes, ensuring efficient and error-free production releases

Professional Experience:

- Informatica MDM SaaS & IICS Developer in Capgemini, Bangalore in August 2022 to till now

Educational Qualifications:

- Completed B.Tech from JNTUA Ananthapuramu.

Technical Skills

- **ETL Tools:** Informatica IICS (CDI, CAI, CDQ, IDQ), Informatica MDM SaaS (C360, S360, P360, R360),IDMC
- **Programming & Platforms:** SQL, Unix Shell Scripting, AWS S3
- **Databases:** PostgreSQL, Snowflake, Oracle, AWS S3
- **Other Skills:** Data Profiling, Data Governance, Data Quality Rules, Performance Tuning, Data Cleansing

Project# 1:

Client : Leading Consumer Goods Manufacturer

Environment: Informatica MDM SaaS, Customer 360, Business 360, Cloud Data Quality (CDQ), Cloud Data Integration (CDI), Snowflake, REST APIs, SQL

Role : Informatica MDM SaaS Developer

DESCRIPTION:

Involved in design, development and maintenance of database for IICS MDM saas Data C360.

Worked on implementing an enterprise-wide MDM SaaS solution covering Customer 360, Business 360, CDI, and CDQ to create a unified 360-degree view of customers, suppliers, products, and business partners. Consolidated data from CRM, e-commerce, ERP, POS, and partner systems to build Golden Records, improve data quality, reduce duplication, and enable analytics, marketing, supply-chain optimization, and customer experience initiatives and The solution supports real-time data integration, data standardization, survivorship rules, and governance workflows across global business units.

ROLES AND RESPONSIBILITIES:

- Implemented **Informatica MDM SaaS** for Customer 360 & Business 360 domains.
- Designed **Golden Record** creation logic using survivorship, trust rules & source priority.
- MODELLED CUSTOMER, BUSINESS PARTNERS, SUPPLIERS, ACCOUNTS, AND HIERARCHY ENTITIES.
- Built complex **relationships** (customer → account, supplier → product, store → region)
- Integrated customer data from Salesforce, website, mobile app, POS, loyalty, and offline channels.
- Built 360-degree customer profiles including demographics, behavior, preferences & transactions.
- Applied **fuzzy matching, identity resolution** & de-duplication logic.
- Developed Business 360 master data for suppliers, vendors, partners, and distributors.
- Designed workflows for vendor onboarding, approvals, and data governance.
- Implemented business hierarchy management for region, store & channel alignment.
- Implemented **CDQ rules** for address standardization, validation, enrichment & formatting.
- Developed DQ checks for completeness, accuracy, pattern validation & duplicate detection.
- Built dashboards to monitor **DQ scores**, rule failures, and data anomalies.
- Built CDI pipelines using **ADF + Informatica Cloud** to ingest and publish master data.

- Integrated MDM with downstream systems using real-time REST APIs & batch jobs.
- Implemented Change Data Capture (CDC) for incremental updates into Snowflake.
- Created data stewardship workflows for exception management & manual record corrections.
- Worked with business teams to define **data policies, metadata, and governance rules.**
- Developed audit logs, lineage tracking, and role-based security.

➤

Project#2:

- **Client** : *GEICO*
- **Role** : *Informatica IICS Developer*
- **Technologies** : *Informatica IICS, IDQ, CDQ, Oracle 10g, UNiZ*

PROJECT DESCRIPTION:

The Government Employees Insurance Company (GEICO) is an American vehicle insurance company headquartered in Chevy Chase, Maryland. In addition to auto insurance, GEICO provides motorcycle, ATV, RV, boat, snowmobile, travel, pet, event, homeowner, renter, and jewelry insurance options. It is the second largest auto insurer in the United States, after State Farm. GEICO is a wholly owned subsidiary of Berkshire Hathaway, which provides coverage for more than 24 million motor vehicles owned by more than 15 million policy holders as of 2017. GEICO writes private passenger automobile insurance in all 50 U.S. states and the District of Columbia. The insurance agency sells policies through local agents, called GEICO Field Representatives, over the phone directly to the consumer via licensed insurance agents, and through their website. Its mascot is a gold dust day gecko with a Cockney accent, voiced by the English actor Jake Wood. GEICO is well known in popular culture for its advertising.

Responsibilities:

- Create Informatica mappings to build business rules to load data.
- Used Informatica power centre to extract, transform and load data from multiple input sources like Oracle and flat files to target data base Oracle 10g/11g.
- Used mapping designer and mapplets to generate different mappings for different loads.
- Responsible for monitoring all the sessions that are running, scheduled, completed and failed. Debugged the mapping of the failed session.
- Developed Mapping to load the data in slowly changing dimension (SCD Type1 & SCD Type2)
- Used various transformations like source qualifier, expression, filter, lookup, update strategy transformations etc.
- Workflow Manager used for creating and maintaining the sessions.
- Designing, Scheduling & Monitoring of workflows.
- Understanding existing business model and customer requirements.
- Optimizing/Tuning mappings for better performance and efficiency.
- Involved in Unit Testing.
