Project # 2

Organization: Concentrix Pvt Ltd

Client: JELD WEN

Duration: Dec 2024 to June 2025

Role: Technical Support Adviser II

Project Type: S/4 Hana End to End Implementation Project

Client Profile: JELD-WEN is an American company with its headquarters in Charlotte, North Carolina. The company operates more than 120 manufacturing facilities in 19 countries. JELD-WEN designs, produces and distributes interior and exterior doors, wood, vinyl and aluminum windows, wall systems, shower enclosures, closet systems and other components used in the new construction, as well as repair and remodel of residential homes and non-residential buildings

Responsibilities:

- Collaborate with stakeholders: Work closely with business users, functional teams, and stakeholders to understand the financial business requirements.
- Document requirements: Gather and document detailed business requirements for financial processes (e.g., financial accounting, controlling, reporting, etc.).
- Gap analysis: Identify any gaps between the out-of-the-box functionality of SAP and the organization's business requirements. Recommend potential solutions to close those gaps.
- Blueprint development: Based on gathered requirements, create a blueprint of the financial processes and how they will be implemented in SAP. This includes designing the chart of accounts, financial statement versions, cost centers, profit centers, etc.
- Process design: Design end-to-end financial processes, including financial accounting (FI), controlling (CO), asset accounting (AA), and integration with other modules (e.g., Materials Management – MM **Procure to pay**, Sales and Distribution - SD).
- Document design: Prepare functional specification documents for the proposed design, ensuring they align with both business requirements and SAP capabilities.
- Integration design: Ensure that the financial processes are properly integrated with other modules, such as MM, SD, or HR, and outline data flows across systems.
- Customization: Based on the gap analysis, configure SAP to meet the specific business requirements that cannot be addressed by the standard functionality. This may include customizing financial reports or special accounting logic.
- Functional specifications for development: For any required custom development, such as custom reports or interfaces, create detailed functional specifications for developers.
- Coordination with ABAP developers: Work with ABAP (Advanced Business Application Programming) developers to ensure that any custom developments are aligned with the financial design and requirements.
- Training materials: Develop training materials for end-users to help them understand new processes and how to navigate the SAP system in relation to financial processes.
- End-user training: Conduct or facilitate training sessions for end-users on how to use the SAP Finance

modules in their daily tasks.

- Documentation: Ensure all configurations, processes, and customizations are well-documented in detail to ensure future system maintenance and troubleshooting are easier
- Cross-functional collaboration: Collaborate with consultants from other SAP modules (e.g., SAP MM, SD, or HR) to ensure that the financial processes are fully integrated with other business processes.
- Configuration workshops: Participate in or lead configuration workshops where the design is reviewed, refined, and finalized. These workshops are typically held with key business users and stakeholders to ensure all needs are covered.
