

ETL / Data Pipeline Tester – Databricks & Azure

5–8 Years | Bangalore (Preferred) | Immediate Joiners

About the Role

We are looking for an **ETL / Data Pipeline Tester** to support a large-scale data platform built on **Databricks, Azure Data Factory, and Azure services**.

This is a **hands-on contract role** focused on **data validation, data quality, and pipeline testing** rather than UI or manual application testing.

The ideal candidate has **real experience validating data flows**, understanding transformations, and identifying data discrepancies across large datasets.

Key Responsibilities

- Validate **ETL data flows** across source, transformation, and target layers
 - Perform **data reconciliation and quality checks** (row counts, aggregates, mismatches)
 - Test **Databricks-based transformations** using SQL and notebooks
 - Validate **Azure Data Factory (ADF)** pipelines, activities, dependencies, and reruns
 - Conduct **data validation for large datasets** and support performance benchmarking
 - Test **Azure Functions–based workflows** for correctness and reliability
 - Support **load and performance testing** using tools like JMeter or BlazeMeter (exposure is sufficient)
 - Validate data consistency between backend datasets and **Power BI reports** (optional / plus)
 - Perform **root cause analysis** for data discrepancies and pipeline failures
-

Must-Have Skills

- Strong experience in **ETL / data pipeline testing**
- Hands-on **data validation and reconciliation** experience
- Working knowledge of **Databricks** (tables, SQL, transformations)
- Experience testing **Azure Data Factory (ADF)** pipelines
- Good **SQL skills** for validation and troubleshooting
- Ability to reason about **data quality and transformation issues**

Good-to-Have / Plus Skills

- Exposure to **JMeter / BlazeMeter** for performance or load testing
- Experience validating **Power BI datasets or reports**
- Testing **Azure Functions or automated workflows**
- Basic **test automation or scripting** experience (Selenium or open-source tools)
- Familiarity with using **AI tools** for test case generation or debugging

Experience & Other Details

- **Experience:** 5–8 years
- **Location:** Bangalore preferred (flexible for strong profiles)
- **Notice Period:** Immediate or short notice strongly preferred

What We're Looking For

- Practical, execution-focused testers
- Candidates who can **explain how they validate data**, not just list tools
- Above-average quality suitable for a **fast-moving contract engagement**

(This is not a UI automation or manual QA role.)
