

NAGULAYYA P

AI Engineer

☎ =91-9110611694 @ nagullayya1994@gmail.com

SUMMARY

I am a dedicated AI and ML professional with over 6.8 years of experience in crafting and deploying innovative generative AI solutions on Google Cloud Platform and Microsoft Azure. My technical skills include developing robust Python-based backend functions, creating APIs, and leveraging advanced AI models such as Vertex AI, Agentic AI, OpenAI and Gemini Model. I am adept at implementing complex AI workflows using LangChain, with a strong focus on integrating machine learning techniques to drive impactful solutions.

EXPERIENCE

AI Engineer Softic Digitech Pvt Ltd	📅 01/2025 - 07/2025
Project Name : Multi Agent Client name : EY	
• Developed and deployed Agentic AI agents using Google ADK (Agent Development Kit), optimized for the Gemini ecosystem. • Implemented workflow orchestration (sequential, parallel, and loop flows) with ADK to automate complex multi-step tasks. • Built multi-agent systems in ADK enabling agents to collaborate, communicate, and solve problems autonomously. • Integrated ADK agents with external tools and APIs, enhancing decision-making and execution capabilities. • Designed modular AI agent architectures in ADK to ensure scalability, reusability, and faster development cycles. • Leveraged ADK's Python SDK for custom agent development and seamless integration with enterprise systems.	
AI Engineer Softic Digitech Pvt Ltd	📅 08/2023 - 04/2025
Project Name : patient helper Client Name : Tcs	
• Developed an NLP-to-SQL pipeline to convert user queries into SQL statements and dynamically fetch results from structured big query databases. • Designed and implemented RESTful APIs using Python and FastAPI to retrieve patient counts and details efficiently. • Engineered MongoDB solutions to store cohort data and implemented robust RBAC (Role-Based Access Control) functionality for secure access management. • Applied Retrieval Augmented Generation (RAG) techniques for performing Question Answering (QA) tasks on medical documents. • Leveraged the Gemini model on Vertex AI for advanced QA tasks, optimizing response accuracy from medical documents. • Created unit tests for Python-based APIs to verify performance and reliability. • Deployed and tested backend services on Google Cloud Compute Engine to enhance scalability, system performance, and deployment stability. • Utilized Google Cloud Platform(GCP) to deploy, manage, and scale backend services, ensuring reliability, high availability, and efficient resource usage across cloud infrastructure • Engineered intelligent backend solutions for healthcare platforms by leveraging GenAI tools and cloud technologies, enhancing automation workflows and data retrieval accuracy.

EXPERIENCE

AI Engineer

Softic Digitech Pvt Ltd

04/2022 - 05/2023

Project Name : AI Explorer

Client Name : Tech mahindra

- Worked across multiple content explorers—Chat, Web, Docs, PDFs, Images, Videos to perform QA using Retrieval-Augmented Generation (RAG) and LangChain
- Engineered intelligent backend solutions for healthcare platforms using GenAI tools and cloud technologies, improving automation and information retrieval
- Implemented summary generation, text generation, and code generation features using advanced LLM model
- Converted unstructured data to structured formats and applied RAG techniques for enhanced information extraction
- Implemented RBAC (Role-Based Access Control) features and stored access control data securely in Firestore
- Integrated Text-to-Speech and Speech-to-Text APIs to enable voice interface functionality
- Developed scalable backend services using Python, FastAPI, and Flask; utilized Swagger and Postman for API testing and validation
- Deployed and tested backend code using Google Cloud Compute Engine to ensure performance, scalability, and resilience.

Backend Python Developer

Softic Digitech Pvt Ltd

01/2019 - 01/2021

Project Name : Healthcare Appointment Management

Client Name : Infosys

- Designed and implemented a FastAPI-based healthcare backend to manage patient appointments, doctor schedules, and notifications.
- Integrated Firestore for storing patient records, doctor details, and appointment data securely.
- Implemented role-based access control (RBAC) for patients, doctors, and administrators.
- Automated appointment reminders using Cloud Scheduler and Pub/Sub with email and SMS notification triggers.
- Containerized and deployed the service on GCP Cloud Run with auto-scaling enabled.
- Developed API test suites using Pytest and validated endpoints with Postman.
- Added Swagger UI for clear API documentation and developer usability.
- Secured sensitive patient data using Google Secret Manager and HTTPS endpoints.

EDUCATION

B.Sc

Sri Venkateswara University, Tirupati

07/2014 - 05/2017 Tirupati
