Profile Summary

- ETL Test Engineer with 5 years of experience in Software Testing, specializing in ETL/DWH, BI, and Database Testing.
- Strong expertise in Test Case Design, Test Execution, Defect Tracking, and Data Validation.
- Hands-on experience with ETL tools like Informatica PowerCenter, Azure Data Factory, and Azure Data Bricks.
- Hands-on experience with Azure Cloud services including Data Factory, Data Bricks, Azure Blob, and Azure DevOps for data integration, migration, ingestion, and orchestration.
- Proficient in SQL, Data Warehousing concepts, and Data Quality validation.
- Experience with Oracle and Snowflake databases for backend and migration testing.
- Skilled in functional, regression, ingestion, and reconciliation testing of ETL pipelines.
- Strong understanding of SDLC, STLC, and Agile methodologies.
- Experienced in defect life cycle, using JIRA and Azure DevOps for tracking and reporting.
- Excellent communication and analytical skills with a focus on quality and accuracy.

Technical Skills

- Operating Systems : Windows, UNIX
- Languages : SQL, Snow SQL, Oracle SQL, and Python
- Databases : Oracle 10g, Snowflake
- ETL Tools : Informatica PowerCenter, Azure Data Factory, Azure Data Bricks
- Cloud Platforms : Microsoft Azure (ADF, Data Bricks, Azure Blob, Azure DevOps)
- Test Management Tools : JIRA, Azure DevOps
- BI Tools : Power BI, Tableau
- ETL Automation Tools : Q-Bot, Beyond Compare

Data Ingestion Expertise:

- Building and validating ingestion pipelines using ADF and Informatica.
- Handling data ingestion from multiple sources (SQL, APIs, flat files, on-prem DBs).
- Automating ingestion workflows using triggers, parameterized datasets, and pipelines.
- Managing incremental and full-load ingestion strategies for large datasets.

Education

- Bachelor of Technology (B.Tech) – Mechanical Engineering
Jawaharlal Nehru Technological University, Anantapur (JNTUA), 2020

Work Experience

ETL Test Engineer

Talodyn Networks Pvt Ltd (Diamond Pick) — Dec 2024 – Sep 2025

ETL Test Engineer

ACS Global Tech Solutions Pvt Ltd — Feb 2023 – Aug 2024

Test Engineer

Altech Star Solutions Pvt Ltd — Jun 2020 – Jan 2023

Project Details

- Project #3 : UCB Pharma (Talodyn Networks Pvt Ltd - Diamond Pick)

Duration : Dec 2024 – Sep 2025

Client : UCB Pharma, Global Biopharmaceutical Company (Belgium)

Tools : Azure DevOps, Azure Blob, IDMC, Snowflake, SAS DI, Denodo

Languages : SQL, Python, ETL Tools (IDMC)

Testing Approach : ETL/DWH Testing, Data Quality Assurance

Role : Senior ETL Test Engineer

Description:

UCB Pharma focuses on treating neurological and immunological diseases. This project ensures accurate ETL of clinical, research, and patient data into the company's data warehouse to support BI and analytics. The scope included validating ingestion pipelines from multiple data sources (SAS DI, clinical systems, and research databases) into Snowflake via Azure Blob and IDMC. The ETL testing team verified end-to-end data flow across staging, transformation, and warehouse layers. The project also involved migration testing from legacy SAS DI to Informatica Cloud, ensuring minimal data loss, error-free transformation, and compliance with data privacy standards.

Roles & Responsibilities:

- Reviewed SAS DI jobs and gathered test requirements for Informatica Cloud migration.
- Designed and executed ETL and data ingestion validation scripts using SQL and ADF.
- Verified ingestion from Azure Blob to staging and DWH layers ensuring data completeness.
- Prepared test strategy and created detailed test cases for source-to-target validation.
- Conducted data lineage and transformation logic validation in IDMC pipelines.
- Performed regression, reconciliation, and incremental load testing for ETL processes.
- Logged and tracked defects in Azure DevOps, coordinating with developers for closure.
- Ensured data quality, integrity, and compliance with GxP and GDPR standards.

- Project #2 : GTIR (Global Tax Information Reporting) (ACS Global Tech Solutions Pvt Ltd)

Duration : Feb 2023 – Aug 2024

Client : ANZ Banking Group Limited (Australia)

Tools : Control-M, UNIX, WinSCP, Oracle, Azure Data Factory, Azure Data Bricks

Languages : SQL

Testing Approach : ETL/DWH Testing, Database Testing

Role : ETL Test Engineer

Description:

ANZ is a major Australian banking and financial services company. The project aimed to generate FATCA and CRS reports for compliance with tax reporting obligations. The ETL testing team focused on verifying data ingestion from diverse internal systems into Azure Data Lake using Azure Data Factory, followed by complex transformations in Databricks. The scope covered validation of staging, transformation, and reporting layers, along with monitoring Control-M job executions. The project emphasized financial compliance, ensuring accurate tax data aggregation and regulatory reporting as per FATCA/CRS standards.

Roles & Responsibilities:

- Developed SQL-based test cases for ETL workflows.
- Validated data ingestion and transformation between Azure Data Factory and Databricks.
- Conducted data validation at staging, transformation, and reporting layers.
- Tested incremental ingestion strategies using ADF pipelines.
- Verified mapping logic, business rules, and aggregation calculations.
- Coordinated with Dev and BA teams to troubleshoot data ingestion failures.
- Reported defects in Azure DevOps and maintained test metrics.

- Project #1 : Cigna Healthcare (Altech Star Solutions Pvt Ltd)

Duration : Jun 2020 – Jan 2023

Client : Cigna, USA

Tools : Oracle TOAD, Cypress, Jira

Testing Approach : ETL/DWH Testing, Database Testing

Role : ETL Test Engineer

Description:

Cigna processes large volumes of healthcare data such as patient records, claims, provider details, and financial transactions. The ETL testing process focused on validating data extraction from multiple source systems, transformations applied using business rules, and loading into the centralized data warehouse. The project required end-to-end data

verification, from raw source ingestion through transformation and reporting. The objective was to ensure accuracy, reliability, and compliance with HIPAA and healthcare data privacy standards while optimizing ETL workflows for better performance.

Responsibilities:

- Verified data mappings and transformations.
- Ensured performance optimization and data consistency.
- Reported test status and maintained HIPAA compliance.
- Conducted end-to-end ETL validation including source extraction and target loading checks.
- Designed and executed SQL queries for data reconciliation and integrity validation.
- Supported migration testing and data pipeline debugging.

Declaration

I hereby declare that the information provided above is true to the best of my knowledge and belief.
