Summary

Senior analyst with extensive experience in client management, data analysis, data modeling, and client relationship management. Proficient in various software. Demonstrated expertise in industry-specific tasks. Highly skilled at driving successful outcomes through strategic decision-making.

Skills

- Data Analysis
- Business Intelligence
- Data Modeling (Erwin & SQL Server, Conceptual, Logical & Physical Modeling)
- Advanced Excel
- Client management (Business rules)
- Odi 11g (CDC workflows)
- MS SQL
- Microsoft Azure Cloud environment
- Project Monitoring
- Powerbi
- ETL
- Data Warehouse
- Agile Methodolgy
- Python
- R
- Tableau
- T-SQL

Sr. Manager(Data Analysis and Business Intelligence)

Project Description – Bio-metric Project (Airport & Banking)

Face and Fingerprint Authentication

- Analyzed data from multiple sources to identify trends and patterns.
- Developed complex financial models for forecasting and budgeting purposes.
- Prepared presentations on analysis results for management team.
- Analyzed large datasets to identify trends, patterns and correlations for business insights.
- Design and maintain enterprise data models (**conceptual, logical, and physical**) in **Erwin**, ensuring alignment with business requirements and database architecture standards.
- Develop and optimize physical database models in **Erwin**, including defining tables, relationships, indexes, and constraints for improved performance and scalability.
- Implemented Tableau dashboards for real-time tracking of key performance metrics.
- Designed, developed, and maintained ETL pipelines in Azure Data Factory (ADF) to integrate data from multiple sources (on-premises and cloud).
- Utilized SQL queries to efficiently extract, transform, and load data into

databases.

- Monitor changes in laws, regulations, and guidelines issued by regulators and update internal policies accordingly.
- Prepare and submit accurate and timely regulatory reports
- Collaborated with BI teams to integrate Azure-based data into Power BI dashboards and reports.
- Translated raw data into meaningful information using statistical techniques.
- Designed automated ETL processes for efficient data extraction, transformation and loading in order to improve accuracy and reliability of reporting systems.
- Collaborated with stakeholders across the organization to understand their needs from a data perspective.

Senior Analyst (Data Analysis and Business Intelligence)

Project Description – Insurance Domain Finger Minutiae Record - Finger Image Record (FMR-FIR) Modality.

FMR-FIR – The Unique Identification Authority of India (UIDAI) has rolled out an in-house Artificial Intelligence/Machine Learning (AI/ML) technology-based Finger Minutiae Record – Finger Image Record (FMR-FIR) modality.

This technology, specifically designed to enhance Aadhaar Enabled Payment (AePS) transactions, aims to tackle fraudulent activities, including the misuse of cloned fingerprints.

- Analyzed data from multiple sources to identify trends and patterns.
- Developed complex financial models for forecasting and budgeting purposes.
- Prepared presentations on analysis results for management team.
- Analyzed large datasets to identify trends, patterns and correlations for business insights.
- Implemented Tableau dashboards for real-time tracking of key performance metrics.
- Utilized SQL queries to efficiently extract, transform, and load data into databases.
- Maintain documentation to support reported figures and regulatory submissions.
- Develop and optimize physical database models in **Erwin**, including defining tables, relationships, indexes, and constraints for improved performance and scalability.
- Act as a liaison between the organization and regulatory authorities.
- Track and review project implementation progress against approved timelines,

budgets, and deliverables.

- Translated raw data into meaningful information using statistical techniques.
- Designed automated ETL processes for efficient data extraction, transformation and loading in order to improve accuracy and reliability of reporting systems.
- Collaborated with stakeholders across the organization to understand their needs from a data perspective & fraudulent activities.
- Maintained documentation of all the processes related to Data Analysis.

Project Planning Consultant (Data Analyst and Business Intelligence)

Project Overview:

Managed data flow, analyzed network performance, and optimized connectivity for rural and undeserved areas while working on the Bharat Broadband Network Limited (BBNL) project under the Digital India initiative.

Represented clients at Planning Appeals and Public Inquiries when necessary.

- Analyzed large datasets to uncover valuable business insights through trend, pattern, and correlation identification.
- Prepare regular monitoring reports, dashboards, and presentations for senior management.
- Use Erwin for end-to-end data modeling, including conceptual, logical, and physical designs, ensuring alignment with enterprise architecture and business objectives.
- Coordinate with contractors, consultants, and stakeholders to resolve implementation bottlenecks.
- Developed dashboards with Tableau to monitor key performance indicators.
- Provided data-driven solutions to support decision making.
- Leveraged SQL queries to extract, transform and load data into databases.
- Optimized existing database structures for better performance on analytics tasks.
- Maintained documentation of all the processes related to Data Analysis.
- Collaborated with stakeholders across the organization to understand their needs from a data perspective.
- Built visualizations that enabled users to quickly interpret results from complex analyses.

- Data Analysis

Assistant Manager (Data Analyst and Business Intelligence)

Project Description – Insurance Domain (Global Products and Platform)

- Business intelligence report creation for insurance data, data analysis, and stakeholder interaction.

- Data Modeling
- Advanced Excel
- Power BI
- Data Analysis
- MS Sql 2008 & 2021
- T-SQL
- Data warehouse
- SSIS , SSRS

- Provided guidance and support to junior staff members on daily tasks, projects, and objectives.
- Coordinated with other departments to ensure smooth flow of operations.
- Performed data analysis and created reports to identify trends or discrepancies in the data.
- Created and managed documentation for database management system.
- Monitored database performance, identified issues, and provided solutions for improvement.
- Provided technical guidance on the use of database tools such as SQL Server Management Studio.
- Resolved complex queries by analyzing query plans and optimizing indexes when necessary.
- Developed and maintained data models to analyze customer insurance coverage, trends, and pricing.
- Identified areas of improvement in existing policies and procedures related to data management.
- Utilized SQL programming language to query databases for reporting purposes.
- Created detailed presentations summarizing findings from complex analyses with recommendations for actionable insights.
- Collaborated with stakeholders across multiple departments to ensure accurate interpretation of results.
- Generated comprehensive reports outlining customer demographics, risk profiles, claims history.
- Worked with internal teams to understand business needs and changing strategies.
- Cleaned and manipulated raw data

Data Analyst

DISHA Project - DISHA Dashboard brings data from 44 flagship government schemes (**healthcare, banking, finance, and citizen service delivery**) to one place for the first time. This helps government officials at all levels explore and assess key government initiatives for any geographic level, at any time period. The DISHA Dashboard helps Members of Parliament (MPs), Members of Legislative Assembly (MLAs), and District Officials track the performance of all major flagship schemes in their districts and constituencies.

- Data management for DISHA Project, responding to user queries, database maintenance, and report generation.

- Power BI
- Data Analysis
- MS Sql 2008 & 2012
- Data warehouse
- Project Monitoring
- Apache Airflow
- Python
- R
- Data Pipeline

- Analyzed large datasets to identify trends, patterns and correlations for business insights.
- Worked on multiple **Government of India domain schemes** including healthcare, banking, finance, and citizen service delivery, ensuring accurate data management and process implementation.
- Implemented **data privacy controls** to protect **PHI (Protected Health Information)** in accordance with HIPAA regulations for national health schemes governed by **NHA and WHO guidelines**.
- Collaborated with functional, security, and compliance teams to **identify, assess, and mitigate HIPAA-related risks** across healthcare data workflows.
- Developed dashboards with POWER BI to monitor key performance indicators.
- Gathered requirements from stakeholders (All government ministry schemes) to design data models and reports.
- Facilitate use of MIS, GIS, and digital monitoring tools for real-time project tracking.
- Leveraged SQL queries to extract, transform and load data into databases.
- Conducted exploratory analysis of complex datasets using SQL, Python libraries such as NumPy and Pandas.
- Defined KPIs based on collected data sources.
- Built visualizations that enabled users to quickly interpret results from complex analyses.

- ODI 11 G
- ELT

Programmer

Project Description – E – Transport (Vahan 4 & Sarathi 4)

- Development and maintenance of data replication packages, troubleshooting database issues, and query development.
- Analyzed source system transaction patterns and designed **CDC architecture** in **ODI 11g/12c** to support scalable incremental data movement for national e-Transport applications.
- Ensured **data quality and compliance** by validating CDC data against business rules and regulatory reporting standards mandated by Government of India systems.
- Supported **production deployments and post-release validation** of CDC processes, including backfilling data and reinitializing journals when required.
- Analyzed requirements and designed database schemas for applications.
- Collaborated closely with project managers, designers, and other developers in order to complete tasks efficiently and effectively.
- Generated reports from databases using SQL queries.

- Created SQL Server Integration Services packages for incremental and full loads of data from various sources.
- Developed ETL packages to extract, transform, and load data from multiple sources into a data warehouse.
- Involved in creating database objects such as tables, views, indexes based on business requirements.
- Optimized existing queries for better performance using SQL query tuning techniques.
- Designed complex reports using SQL Server Reporting Services.
- Integrated multiple data sources into one unified view using views or joins in SQL queries.
- Developed ETL processes using SSIS packages for loading data from various sources into a data warehouse environment.
- Generated ad hoc reports upon request from stakeholders utilizing Microsoft Excel Pivot Tables or Access Queries.

Software Developer (Data Integration/ODI)

Project Description – E-Transport (Vahan & Sarathi)

- Development and maintenance of data replication packages, troubleshooting database issues, and report generation.
- Developed and implemented data warehouse models for various reporting requirements using SQL Server 2008, 2012, 2014.
- Configured and managed **journalizing (Simple and Consistent CDC)** using ODI Knowledge Modules, handled **subscription management**, and ensured data consistency across multiple transport databases while processing high-volume transactional data.
- Designed and implemented **Change Data Capture (CDC)** in **ODI 11g and 12c** to capture incremental changes (INSERT, UPDATE, DELETE) from source transport systems (vehicle registration, license, permit data) and load them into the central data warehouse, ensuring near real-time data availability.
- Created SSIS packages to extract, transform and load data from multiple sources into the Data Warehouse.
- Worked with Business Intelligence tools such as Tableau and Power BI for creating interactive dashboards.
- Maintained documentation related to all aspects of Database Design and Development activities like ER diagrams, DDL scripts.
- Investigated issues reported by end users related to data quality and accuracy within the Data Warehouse environment.

Education

02/2015	PG-DIPLOMA in Advance Computing CDAC-NOIDA
07/2014	Bachelor of Technology (B.Tech.) in Information Technology R.D. Engineering College, Ghaziabad
06/2010	Standard 12th U.P. BOARD
06/2008	Standard 10th U.P. BOARD

Accomplishments

- Awarded a **Certificate of Appreciation** by the **Ministry of Electronics and Information Technology, Punjab Civil Secretariat, and Chandigarh**, for **successfully completing the migration of all RTOs in Punjab State ahead of schedule**, demonstrating efficiency, dedication, and exceptional project execution.
