PROFILE SUMMARY

- Experienced Data Engineer with 5+ years of overall IT experience, including 4+ years of hands-on expertise in designing and developing scalable ETL and data processing pipelines using Azure technologies.
- Proficient in Azure Data Factory (ADF), Azure Databricks, PySpark, Spark SQL, Azure SQL Database and Azure Data Lake Storage (ADLS Gen2) for implementing robust batch and semi structured data workflows to support enterprise-scale data platforms.
- Experience in implementing Medallion Architecture by structured data into Bronze, Silver and Gold with Azure Data Lake, Delta Lake, ensuring efficient storage, processing, and analytics.
- Experience in Optimizing Spark Jobs for high-performance data processing and efficient resource utilization in large-scale data environments.
- Experience in working with Delta tables and schema evolution in Databricks, ensuring ACID compliance and efficient data versioning in large-scale processing.
- Good exposure to building near real-time data processing workflows using Apache Spark Structured Streaming in Azure Databricks.
- Experience in implementing Error Logging, Audit Logging, and Data Reconciliation processes, along with automating email notifications for pipeline failures using Azure Logic Apps, to enhance monitoring, troubleshooting, and data reliability.
- Hands-on experience in working with multiple data formats such as CSV, JSON, and Parquet for efficient data ingestion and processing across diverse workflows.
- Proficiency in writing SQL queries in SQL server for data retrieval and manipulation.
- Strong knowledge of data warehousing concepts such as fact and dimension tables, Star and Snowflake schemas, along with data modeling techniques for designing normalized and de normalized structures to support ETL best practices, reporting, analytics, and business intelligence.
- Good Exposure to Snowflake, including data ingestion and transformation in hybrid data platform scenarios.
- Experienced with version control using Git/GitHub, and automating deployments using DevOps CI/CD pipelines for ADF and Databricks workflows across environments.

IT Skills

- | | | |
|----------------------|---------------------------|---------------------|
| • Azure Data Factory | • Azure Data Lake Storage | • Azure Data Bricks |
| • Azure SQL database | • PySpark | • SQL |
| • Delta Lake | • Unity Catalog | • Spark SQL |
| • Git/GitHub | • Azure Logic Apps | • Spark Streaming |
| • Python | • Azure DevOps | • Data Modeling |
| • Data Warehouse | • Data Migration | • Snowflake |

EDUCATION

M. Tech from Jawaharlal Nehru Technological University, India-2020.

ORGANISATIONAL EXPERIENCE

Sep2024-till now Datarise Solutions Pvt. Ltd, as Data Engineer

Dec2020-Aug2024, Clinet IT Solution Pvt. Ltd, as an Azure Data Engineer

PROJECTS

Client: SquareMouth, Florida

Environment: Azure Data Factory, Azure DataBricks, PySpark, Delta Lake, Azure Data lake Storage, SQL Server, Logic Apps.

Responsibilities:

- Designed and optimized scalable, end-to-end ETL pipelines to efficiently ingest, transform, and store data into Azure Data Lake Storage from multiple sources.
- Implemented Medallion Architecture(Bronze, Silver, Gold layers) in Databricks.
- Developed and maintained Databricks notebooks using PySpark for data cleansing, standardization, validation, and transformation, ensuring high data quality and consistency across environments.
- Developed parameterized and reusable PySpark notebooks to improve flexibility, maintainability, and adaptability of data pipelines.
- Optimized Spark job performance by implementing partitioning, Salting, caching, broadcast joins, file compaction, and Z-ordering to minimize shuffle and improve query performance.
- Implemented Delta Tables for time-travel and schema evolution capabilities to enable historical data tracking and compliance with business audit requirements.
- Leveraged Adaptive Query Execution (AQE) for dynamic optimization of spark query execution plans, enhancing performance and reducing resource overhead.
- Designed and implemented Slowly Changing Dimension (SCD Type1 & Type 2) logic in Delta Lake to maintain historical data and enable change tracking over time.
- Implemented Azure Logic Apps to send email alerts and failure notifications.
- Created and maintained dimensional models and fact tables within Delta Lake Gold Layer and supporting power BI dash boards and analytical reporting.
- Implemented CI/CD pipelines using Azure DevOps for automated deployment of ADF pipelines, Databricks notebooks, and configuration files across environments.
- Collaborated closely with cross-functional teams including Business Analysts, QA, BI teams to translate business requirements into robust and scalable data solutions.

Client: Zalando, Berlin

Environment: Azure Data Factory, DataBricks, PySpark, Azure data lake Storage, SQL server, AWS S3, Snowflake.

Responsibilities:

- Designed, developed, and maintained ETL pipelines using Azure Data Factory (ADF) to orchestrate seamless data integration into Azure SQL databases.
- Integrated data from various sources such as on-prem SQL Server, File systems into Azure Data Lake Storage (ADLS) for centralized raw data storage.
- Configured and managed Self-Hosted Integration Runtime to enable secure data ingestion from on-premise systems into the Azure cloud environment.
- Maintained audit and error logs of ADF pipelines in Azure SQL, ensuring robust monitoring and traceability of pipeline executions.
- Wrote complex SQL queries and stored procedures in Azure SQL Database to perform data validations, reconciliation, and to support reporting needs across business-critical datasets.
- Conducted data quality checks to validate schema integrity, null values, duplicates, and format mismatches across critical datasets.
- Worked with Azure Databricks notebooks using PySpark for transformation, enrichment, and cleansing of structured and semi-structured data.
- Applied optimization techniques in Databricks Spark to improve performance and cost efficiency.
- Set up Azure Key Vault for secure credential management and integrated it into ADF linked services for secure pipeline execution.

- Integrated Snowflake to support analytical reporting and trend analysis in an e-commerce environment focusing on customer segmentation, purchasing behavior, and revenue forecasting to drive personalized marketing, optimize inventory planning, and enhance overall business performance.
- Enabled cross-cloud data integration by configuring secure data transfers between Azure Data Factory and AWS S3 buckets.
- Collaborated with business users and data analysts to translate data requirements into scalable and optimized data engineering solutions.

CERTIFICATIONS

Microsoft Certified: Fabric Data Engineer Associate (DP-700)
