

Ayushi Jain

RPA Consultant

+91-7000864578 | 4yushijain2@gmail.com | Bengaluru, INDIA | Experience: 6 Years 0 Month | <https://www.linkedin.com/in/ayushi-jain-18668b15a/>

Profile summary

An RPA professional with 6 years of hands-on expertise in UiPath, agentic automation, orchestrating end-to-end automation for finance, operations, Healthcare, Fashion, pharmaceutical industry, Retail, bank skilled in various other rpa tools like Power Automate, Power apps, Python, Graph API, VB.NET, and REST/GraphQL integration.

Skills: UiPath, Agentic Automation, Power Automate, MS Power Apps, GraphQL, Power BI

Certifications

- RPA Developer foundation

Work experience

RPA Consultant — Barclays Jun 2025 - Present

Developed and deployed robust Robotic Process Automation (RPA) solutions using UiPath Studio and UiPath Orchestrator, boosting operational efficiency by approximately 30%.

- Executed advanced Python scripting to build custom libraries, enhancing automation functionality and reducing manual intervention by 25%.
- Managed version control and automated deployment pipelines through GitLab CI/CD, accelerating release cycles by 40% and ensuring reliable project delivery.
- Collaborated with cross-functional teams to identify automation opportunities, driving continuous process improvements and increasing productivity by 20%.
- Leveraged Large Language Models (LLM) and vector databases to architect innovative chatbot solutions, improving user engagement and support response times by 35%.
- Documented critical system processes using Confluence, including System Design Documents (SDD) and Process Definition Documents (PDD), ensuring comprehensive knowledge sharing.
- Utilized Jira for meticulous task creation and management throughout all project phases, enforcing strict adherence to the Software Development Life Cycle (SDLC).
- Implemented Power Automate integrations to unify automation workflows across platforms, resulting in a 15% reduction in process latency and enhanced operational consistency.

RPA Developer — EY Jul 2022 - Jun 2025

Developed and deployed innovative software robots using UiPath and Power Automate to enhance business operations and productivity. Leveraged expertise in UiPath REFramework, Orchestrator, and Queue-based automation for effective RPA implementations across diverse platforms. Engineered attended and unattended bots with strong exception handling capabilities within SAP, Mainframe, Web, Desktop, and Document Understanding processes. Utilized advanced programming skills in Python and C# to deliver impactful RPA solutions, driving successful automation outcomes. Automated end-to-end workflows using Power Automate (Cloud and Desktop flows). Integrated flows with Outlook, Teams, SharePoint, and third-party connectors to streamline operations. Designed and created Canvas and Model-driven applications to automate business processes, significantly enhancing user experience. Executed integrations with Dataverse, SharePoint, and SQL Server, ensuring seamless data connectivity and process efficiency.

Senior RPA Developer — FIS Jan 2021 - Jul 2022

In my capacity as an RPA developer, I shoulder several key responsibilities. Firstly, I am entrusted with the task of crafting strategies aimed at automating diverse business processes. This necessitates thoughtful planning and analysis to ensure the smooth execution of automation initiatives. Additionally, I am charged with the configuration, validation, and vigilant oversight of automated workflows, all geared toward maintaining peak operational efficiency while minimizing the incidence of errors.

Moreover, a pivotal aspect of my role involves conceiving, testing, and rolling out software robots that are geared to streamline and optimize various facets of business operations. My specialized expertise lies in the development of RPA solutions using UiPath, coupled with a strong command of programming languages such as Python and C#. These proficiencies collectively contribute to the successful implementation of automation endeavors, ultimately augmenting operational productivity and efficacy

RPA Developer — Eze Castle Integration (ECI) Jan 2020 - Jul 2021

Within my role as an RPA developer, I assume a range of critical responsibilities. Firstly, I am tasked with the formulation of strategies aimed at automating various business processes. This involves careful planning and analysis to ensure efficient automation. Additionally, I am responsible for configuring, validating, and closely monitoring automated workflows to maintain peak operational efficiency while minimizing the occurrence of errors.

Furthermore, I play a pivotal role in the creation, testing, and deployment of software robots designed to streamline and optimize various aspects of business procedures. My specialization lies in the development of RPA solutions utilizing UiPath, complemented by proficiency in programming languages such as Python and C#. These skills collectively contribute to the successful execution of automation initiatives, ultimately enhancing operational productivity and effectiveness.

Projects

Nintex to Power Platform Migration - Power Apps

8 Weeks

The project aims to migrate existing Nintex workflows/Forms to be converted into cutting edge power apps/ power automate flows. I was part of the automation team to migrate over 30 such forms & automation flows into Power platform. I gained experienced in working Canvas Apps, AI center, Dataverse, AI builder capabilities of Power platform. I used responsive power apps & error free power automate flows to provide a full proof solution to our client.

Product Activation Automation - UiPath / GrpahQL

4 Weeks

The automation uses GraphQL & UiPath tool to automate the retail products on the client merchant website. This automation provides end to end solution to the client in managing the activation, de-activation & tagging of each products according to client needs. It uses GraphQL API queries to fetch relevant products and its variants and activates/de-activates them. The excel reporting part & seamless execution is carried out by UiPath capabilities.

User Account Management Automation - UiPath/ Custom APIs

4 Weeks

The automation helps client to effectively manage their account license cost on a client portal by checking the user active/inactive status. This automation uses Custom APIs & UiPath API capabilities to fetch the valid users & validate them based on multiple criteria. Once the conditions are passed, if the user found inactive, his/her license is removed & the cost of license is saved.

Document Processing using Document Understanding/OCR in UiPath

4 Weeks

The automation aims to streamline Invoice processing of client specific invoices either in pdf, images, scanned copies, etc. The processed invoices are then used to fill put the respective details onto Client website for further supply chain processing. The automation is based on UiPath Document Understanding, OCR, Web automation capabilities.

I also used excel micros for generating accurate excel reports & maintain the invoices details intact.

Capex and Opex Data reporting - UiPath/SAP

4 Weeks

In this project, the bot first downloads macro-enabled SAP reports—such as FBL5N (customer line items), ME2N (purchase order listings), and KE24 (cost center or commitment data)—and uploads them to SharePoint. It then retrieves these Excel files, applies formula-driven calculations (e.g., VLOOKUPs, SUMIFs, macros), and updates the workbooks with key metrics before returning them to the client. Finally, the bot pushes the processed data into a Power BI dataset, triggering dashboard refreshes for real-time visual insights. These are all macro-driven Excel files, meaning no VBA coding is required—only formula changes—making maintenance streamlined and business-friendly.

Broken Link Identification using python

4 Weeks

The automation scrapes all the URLs from the Customer self service portal using BeautifulSoup bs4 library and identifies if the URL is broken or valid. The project uses python libraries such as selenium webdriver, requests, openlyxl, bs4 & pandas.

Account Closure automation - UiPath

4 Weeks

- Led the Account Closure project for Barclaycard, facilitating efficient closure requests for both individual and company card accounts.
- Streamlined the process by integrating three input methods: Microsoft Forms, web forms, and email submissions.
- Enhanced user experience by automating the processing of account closure requests for Small and Medium Enterprises (SME).
- Improved response times and accuracy in processing requests, significantly reducing customer wait times during the account closure process.

Copy Statements automation - UiPath

4 Weeks

- Led the "Copy Statements" project for Barclaycard, optimizing the distribution process of financial statements and transaction details, resulting in a 25% reduction in delivery time.
- Coordinated secure dissemination of sensitive information to authorized signatories, company representatives, and cardholders, ensuring data integrity and confidentiality.
- Ensured strict compliance with regulatory standards and internal policies while managing sensitive data for Barclay Bank PLC employees.
- Enhanced communication workflows, boosting client satisfaction scores by 15% through timely and precise information delivery.

Education

B.Tech/B.E. | Electronics/Telecommunication
Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal
Grade - 7.7/10

2016

Trainings & courses

Agentic Automation With UiPath

Agentic AI - CrewAI Model
