

Goal-oriented and self-driven ETL and Data Warehouse Tester with 5 years of experience in software testing, specializing in ETL and data validation. Experienced in validating data loads using SQL, performing reconciliation checks, and ensuring data quality across data warehouse systems in Agile environments.

Professional Summary :

- ETL / Data Pipeline Tester with 5 years of experience in data warehouse validation, reconciliation, and quality assurance across Azure-based and on-prem ETL environments.
- Validated end-to-end ETL workflows across source, transformation, and target layers ensuring accurate data movement and business rule implementation.
- Performed data reconciliation using row count, aggregate, null, duplicate, and mismatch validations to ensure data quality and consistency.
- Tested Azure Databricks transformations using SQL and notebooks to validate joins, aggregations, filters, and Delta table outputs.
- Validated ADF pipelines, activities, triggers, dependencies, and rerun mechanisms to ensure reliable orchestration of data workflows.
- Conducted validation and performance benchmarking for high-volume datasets to ensure optimal ETL processing efficiency.
- Tested Azure Functions-based workflows for correctness, error handling, and trigger-based execution reliability.
- Performed root cause analysis for data discrepancies and pipeline failures using logs and query-based validation.
- Involved in regression testing during ETL enhancements and release cycles.
- Experienced in test documentation, defect tracking using HP-ALM and JIRA, and working in Agile and Waterfall environments.

Technical Skills:

- Testing : ETL/DWH testing, Data Reconciliation, Data Quality Validation, Incremental Testing, SCD Validation, Root Cause Analysis
- Database : Oracle , Snowflake , SQL Server .
- Cloud Exposure : Azure Synapse , Azure Data Lake, Databricks, Azure SQL Database
- Language : SQL (Primary) , Basics of Python, MongoDB
- Operating System : Windows Family , UNIX
- Tools : Azure Data Factory , HP-ALM, Informatica PowerCenter 10.x , JIRA, ALM

Project 1 : William Morrison Supermarkets PLC, UK

Tools & Technologies :

Domain : Retail / Sales

Client : William Morrison Supermarkets PLC, UK

Environment : Azure Data Factory, Azure Data Lake Gen2, Azure SQL Database, Azure Synapse Analytics, SQL Server, Snowflake

Role : ETL / Data Warehouse Tester

Project Description:

The William Morrison Sales Data Mart project involved ETL and data validation activities for a cloud-based retail sales data warehouse supporting sales performance and inventory reporting. Data was ingested from POS systems and flat files using Azure Data Factory (ADF) and stored in Azure Data Lake Gen2, with curated data loaded into Azure SQL Database and Azure Synapse Analytics. The data warehouse followed dimensional modeling using Star and Snowflake schemas with incremental load and SCD concepts implemented.

Roles & Responsibilities :

- Validated Azure Data Factory pipelines including activity dependencies, trigger execution, and rerun scenarios after failures.
- Monitored pipeline execution logs and analyzed activity-level errors for defect identification
- Validated initial and incremental data loads using record count and aggregation checks.
- Verified SCD Type 1 and Type 2 changes for dimension tables.
- Validated data accuracy and completeness across source, staging, and target tables using SQL-based checks.
- Participated in regression testing during ETL changes and release cycles.
- Conducted root cause analysis for data mismatches across staging and warehouse layers
- Actively participated in Agile ceremonies including daily stand-ups and defect triage meetings.
- Supported performance validation for large dataset loads

Project 2 : Large Retail Chain (US)

Tools & Technologies :

Domain : Retail / Sales

Client : Large Retail Chain (US)

Environment : Informatica PowerCenter 10.x / Informatica Cloud (IICS), Oracle 12c, SQL Server, Quality Center (ALM) , Toad / SQL Developer

Role : ETL / Data Warehouse Tester

Project Description:

The Sales Data Warehouse project involved ETL testing and data validation activities for a retail sales data warehouse used for enterprise reporting and analytics. Data was sourced from Oracle OLTP systems and flat files and processed using Informatica PowerCenter workflows. The data warehouse followed dimensional modeling using Star schema with incremental data loads and SCD implementation to support historical reporting.

Roles & Responsibilities :

- Involved in analyzing business requirements and source-to-target mapping documents.
- Executed ETL test cases and performed SQL-based data validation using Oracle and SQL Server.
- Validated initial and incremental data loads using record count and aggregation checks.
- Verified SCD Type 1 and Type 2 changes for dimension tables.
- Logged, tracked, and retested defects using Quality Center (ALM) and JIRA.
- Participated in regression testing during ETL changes and release cycles.
- Coordinated with development teams during defect analysis and retesting activities.

Project 3 : Prudential Life Insurance, US**Project Description:**

ETL and data validation project to consolidate policy, premium, and claim data from multiple sources into a centralized data warehouse for reporting and analytics. ETL workflows included premium calculations, policy status updates, and claim reconciliations. Data warehouse followed Star schema; supported incremental and full loads.

Academic Qualification:

- ❖ BE (Computer Science Engineering) - VTU in 2016.
- ❖ Certification (Data Science) -IIT-M from 2022 to 2024.

Professional Experience :

- Senior Test Engineer | Taltech Technologies | 18-Feb 2025 –21- Apr 2025
ETL / Data Warehouse testing: SQL-based validation, reconciliation, incremental/full load testing, and SCD verification.
- Master Data Science & Advanced Programming Certification | IIT Madras (2022 – 2024).
- Senior Test Engineer | LTIMINDTREE | 28 July 2021 – 01 July 2022
ETL testing, data reconciliation, record count validation, and defect tracking using JIRA/ALM.
- Business Associate | SBS Technologies | 26 Oct 2020 – 28 Feb 2021
Supported data handling, report validation, and ETL exposure activities.
- Business Associate | Aegis (Startek) | 22 June 2018 – 31 May 2019
Assisted in managing datasets, verifying data accuracy, and supporting QA/ETL tasks.
- Product Designer | HGS | 15 Mar 2016 – 12 Feb 2018.
Managed process documentation, workflow design, and reporting; gained early exposure to data handling.
