Cell: +918884069015

Profile Summary :-

- **3+years of hands-on experience** in designing, developing, and implementing data integration and Master Data Management (MDM) solutions. Specialized in **Informatica MDM SaaS (IDMC)** and **Informatica Intelligent Cloud Services (IICS)**, with a strong foundation in **Cloud Data Quality (CDQ)** and **Data Warehousing methodologies**. Adept at delivering scalable, high-quality solutions aligned with business objectives.
- **Master Data Management (MDM):**
Proven expertise in implementing end-to-end MDM solutions using Informatica MDM SaaS (IDMC), including data modeling, survivorship rules, match & merge logic, and hierarchy management.
Managed master data lifecycle including creation, update, and maintenance of customer and supplier records ensuring data accuracy and compliance with governance standards.
Configured and supported name and address standardization processes to improve data consistency across systems.
Worked on match and merge rules to identify duplicate records and consolidate golden records within MDM environment.
Applied survivorship rules to ensure the most reliable and accurate data is retained during record consolidation.
Monitored data quality metrics and performed root cause analysis for data issues.
Documented data mappings, business rules, and operational procedures for MDM processes.
- **Informatica Intelligent Cloud Services (IICS):**
Skilled in utilizing various IICS components for data integration, transformation, and orchestration across cloud and hybrid environments.
- **Cloud Data Quality (CDQ):**
Hands-on experience with data profiling, cleansing, parsing, standardization, and validation using Informatica CDQ within IICS.
Performed data cleansing, validation, and enrichment activities to improve overall data quality.
- **ETL Development & Data Integration:**
Proficient in ETL development involving data extraction, transformation, and loading from heterogeneous sources like **Oracle, SQL Server, Flat Files, and Excel** using Informatica.
Developed and executed SQL queries (joins, aggregations, group by) for data analysis, validation, and issue troubleshooting.
Developed complex SQL queries using joins, group by, and aggregation functions to analyze large datasets and support data validation activities.
Tuned SQL queries by optimizing joins and filtering conditions to improve performance during data processing.

➤ **Data Warehousing & SCD Implementation:**

Deep understanding of **Data Warehousing concepts** and dimensional modeling. Experienced in implementing **Slowly Changing Dimensions (SCD) Type 1 & Type 2** based on business requirements.

Informatica Development Tools:

➤ **Strong command over Informatica Designer tools such as:**

- * Source Analyzer
- * Target Designer
- * Mapping Designer
- * Transformation Developer

Proficient in building reusable components, parameter files, and complex mappings using transformations like **Lookups (connected/unconnected), Router, Aggregator, Joiner, Update Strategy**, etc.

➤ **Testing & Validation:**

Developed and executed detailed **unit test cases** to validate data transformation logic and ensure data accuracy across the pipeline.

Supported MDM development activities including data onboarding, rule testing, and defect resolution.

Collaborated with business and technical teams to resolve data discrepancies and improve data governance processes.

➤ **Collaboration & Agile Delivery:**

Worked closely with **cross-functional teams** including QA, Testing, Deployment, and Business Analysts to ensure smooth project delivery using Agile methodologies.

➤ **Testing & Validation**

- Developed detailed unit test cases, mapping test scenarios, and data quality validation scripts.
- Conducted source-to-target reconciliation, data sampling, and threshold-based quality checks.

➤ **Collaboration, Governance & Agile Delivery**

- Worked closely with business analysts, QA teams, architects, and deployment teams in Agile/Scrum environments.

Professional Experience :

- ❖ Worked as Informatica MDM SAAS & IICS Developer for **CAPGEMINI**, Bangalore from Sep 2022 to till now.

Educational Qualifications:

- ❖ Completed Graduation From Acharya Nagarjuna University.

Technical Skills :

- ❖ **ETL Tools:** Informatica IICS (CDI, CAI, CDQ, IDQ), Informatica MDM SaaS (C360, S360, P360, R360). IDMC.
- ❖ **Databases:** PostgreSQL, Snowflake, Oracle, AWS S3
- ❖ **Data Quality & MDM:**
Data Profiling & Data Discovery, Data Quality Rule Definition & Enforcement, Data Matching & Survivorship Rules, Reference & Hierarchy Management
- ❖ **Other Skills:** Data Profiling, Data Governance, Data Quality Rules, Performance Tuning, Data Cleansing

Project 1 :

- ❖ Title : Fraud Analytics Data Pipeline for Insurance Claims
- ❖ Client : Fraud Analytics Data Pipeline for Insurance Claims
- ❖ Environment : IICS, IDMC, CDI, CAI, CDQ, SNOWFLAKE, ORACLE DB
- ❖ Role : IICS developer

Description:

The project focused on building a fully automated and scalable **Fraud Analytics Data Pipeline** to improve fraud detection, claim scoring, and decision-making for insurance operations. The goal was to centralize fragmented data from multiple internal and external systems and transform it into **high-quality, analytics-ready datasets** suitable for advanced machine learning models. The solution involved sourcing large volumes of **historical and incremental claims, customer, agent, and hospital/provider data** from Oracle databases, API services, and enterprise applications. Using **Informatica IICS/IDMC (CDI, CAI, CDQ)**, robust ETL pipelines were designed to ingest, validate, cleanse, standardize, and enrich the data. Advanced data quality rules were implemented to handle duplicate records, missing values, inconsistent.

Curated datasets were transformed into ML-ready feature layers, including claim behavior patterns, provider risk metrics, customer history profiles, and anomaly indicators. These datasets were securely published to Snowflake, where data scientists and fraud analysts leveraged them for model training, risk scoring, and real-time fraud investigation workflows.

To ensure operational efficiency, the data pipeline was fully automated using taskflow orchestration, implementing parameterized mappings, and enabling CDC-based incremental loads for daily refresh cycles. Detailed monitoring, logging, and error-handling mechanisms were added to ensure high reliability, data accuracy, and SLA compliance.

Roles & Responsibilities:

- ❖ Designed and developed end-to-end ETL pipelines in **IICS (CDI)** to extract claims, customer, and hospital data from Oracle and cloud sources.
- ❖ Built **parameterized mappings and tasks** for scalable, reusable workflows across environments.
- ❖ Integrated data using **CAI** for API-based ingestion and system-to-system communication.
- ❖ Implemented **CDQ rules** for data validations, standardization, deduplication, and cleansing.
- ❖ Performed data profiling to identify anomalies, gaps, and quality issues in source datasets.
- ❖ Ensured conformance to data governance standards and documentation requirements.
- ❖ Transformed raw data into curated **ML-ready feature tables** required for fraud scoring models.
- ❖ Performed data enrichment, business rule application, and aggregation for analytical use cases.
- ❖ Worked with data scientists to ensure features were consistently available and accurate.
- ❖ Designed and developed pipelines to load curated datasets into **Snowflake**.
- ❖ Optimized ELT workflows for performance, partitioning, and incremental data loads.
- ❖ Ensured timely availability of datasets for analytics and model training.
- ❖ Built **taskflows** to orchestrate multi-step ETL processes, dependencies, and task sequencing.
- ❖ Automated daily incremental refreshes using **CDC logic**, triggers, and taskflow scheduling.
- ❖ Monitored workflows and implemented alerting/error-handling for smooth production runs.
- ❖ Tuned IICS mappings for better throughput, optimized lookups, and reduced processing times.
- ❖ Improved query performance on Oracle and Snowflake through index usage and SQL refinement.
- ❖ Collaborated with fraud analytics teams, data engineering groups, and business stakeholders.
- ❖ Provided ongoing support for pipeline enhancements, bug fixes, and production issues.
- ❖ Participated in Agile ceremonies and contributed to sprint planning, grooming, and UAT cycles. Supported **UAT testing**, prepared test cases, and validated outputs with business teams.
- ❖ Assisted with **deployment activities** including migration of mappings, taskflows, and connections across DEV, QA, and PROD using CI/CD pipelines.
- ❖ Performed **impact analysis** before schema changes or rule updates to avoid breaking downstream systems.
- ❖ Contributed to **documentation**, including mapping specifications, data flow diagrams, and architecture overviews.
- ❖ Supported **performance benchmarking** to reduce pipeline run time and optimize resource usage.
- ❖ Implemented **data reconciliation checks** to verify record-level counts and totals between source and target systems.

Project 2:

- ❖ Title : Multi-Channel Customer Identity Resolution
- ❖ Client : Global Retail & E-Commerce Enterprise
- ❖ Environment : Informatica MDM (Hub Console, IDD, Provisioning Tool), Informatica IDMC / IICS (CDI, CAI, Mass Ingestion), Informatica Data Quality (IDQ), Oracle Database
- ❖ Role : IDMC Developer

Description:

The **Multi-Channel Customer Identity Resolution** project was designed to address the challenge of inconsistent and fragmented customer information collected across a wide range of business systems. These sources included e-commerce websites, retail POS systems, CRM applications, loyalty management platforms, mobile apps, customer service channels, and partner systems. The goal was to build a unified and authoritative **Customer 360° view** that would serve as a single source of truth for all customer-related data within the organization.

The solution was implemented using **Informatica IICS, IDMC, and MDM SaaS (C360, S360)** to consolidate scattered customer identities, harmonize data across heterogeneous schemas, and generate clean, accurate Golden Records. Advanced **fuzzy matching algorithms, survivorship rules, identity resolution logic, and trust scoring models** were configured to resolve duplicate profiles, correct inconsistencies, and merge fragmented identities into a unified customer record.

Using **CDI and CAI**, the project enabled batch and real-time integrations with both legacy and modern cloud applications. **CDQ (Cloud Data Quality)** was leveraged to standardize addresses, validate emails and phone numbers, enforce business rules, and apply global reference data. End-to-end data pipelines were automated through **taskflows** to support continuous updates and incremental changes from multiple customer touchpoints.

The refined and enriched customer data was published to downstream systems including **CRM, Marketing Automation platforms, Customer Analytics solutions, and centralized data lakes/warehouses**. This allowed business teams to run more accurate segmentation, personalized campaigns, loyalty scoring, churn prediction, and behavior analytics.

The project enhanced the organization's ability to understand customer relationships, household structures, cross-channel behaviors, and lifetime value. It further strengthened compliance with **data governance, PII protection, data privacy regulations (GDPR), auditability**, and enterprise-wide data quality standards. The centralized identity resolution framework significantly reduced operational costs, improved customer satisfaction, and supported data-driven decision-making across marketing, sales, customer service, and digital channels.

Roles & Responsibilities:

- ❖ Designed and developed **IICS CDI** pipelines to ingest customer data from CRM, POS, e-commerce, and loyalty systems.
- ❖ Built parameterized mappings for scalable ingestion across different channels and regions.
- ❖ Developed CAI flows for **real-time API-based data exchange** between source applications and MDM.
- ❖ Implemented **CDQ rules** for address standardization, name parsing, phone normalization, and email validation.
- ❖ Performed data profiling to detect duplicates, inconsistencies, missing data, and quality gaps.
- ❖ Applied cleansing logic to ensure accurate, consistent, and standardized customer attributes.
- ❖ Configured **Informatica MDM (C360)** for match & merge, survivorship rules, and trust scores.

- ❖ Designed Golden Record creation logic to achieve a unified customer identity across systems.
- ❖ Developed staging, landing, and base object mappings for MDM ingestion.
- ❖ Implemented transformation rules to harmonize multi-source customer schemas.
- ❖ Defined hierarchies and relationship views to support 360-degree visibility.
- ❖ Built taskflows to automate multi-step ingestion, quality processing, and MDM load cycles.
- ❖ Implemented CDC logic to capture incremental updates from various customer touchpoints.
- ❖ Configured automated monitoring, alerts, and error handling for pipeline reliability.
- ❖ Delivered curated Golden Records to downstream applications like CRM, marketing, Snowflake analytics, and reporting tools.
- ❖ Ensured low-latency updates for real-time personalization and campaign engines.
- ❖ Tuned mappings, lookups, and workflows for high throughput during bulk processing.
- ❖ Optimized MDM match rules for accuracy and performance.
- ❖ Performed RCA for data issues, mapping failures, and mismatch anomalies.
- ❖ Prepared technical specifications, data flow diagrams, MDM configuration documents, and lineage details.
- ❖ Ensured compliance with enterprise data governance and privacy standards (PII masking, RBAC).
- ❖ Worked closely with data governance teams, business owners, CRM teams, and MDM architects.
- ❖ Participated in sprint ceremonies—planning, demos, UAT support, and backlog refinement.
