

ABHISHEK KUMAR JHA

Bangalore, India

abhishekkjha291196@gmail.com | +91-8981229552 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

AI Engineer and Java Full Stack Developer with 4+ years of experience building scalable microservices and production-grade Generative AI systems. Expertise in LLM architecture, Retrieval-Augmented Generation (RAG), AI-driven personalization systems, Spring Boot backend services, and React-based frontend development. Strong background in distributed systems and cloud-native deployment on AWS.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL

AI / GenAI: LLMs, RAG, Prompt Engineering, LangChain, Embeddings, Vector Databases (FAISS, Pinecone), HuggingFace

Frontend: React.js, Redux, TypeScript, HTML5, CSS3

Backend: Java, Spring Boot, Microservices, REST APIs, Apache Kafka, JWT, Hibernate

Cloud & DevOps: AWS (S3, EC2, Lambda, RDS, DynamoDB), Docker, Kubernetes, CI/CD

Databases: PostgreSQL, MongoDB, MySQL, Redis

PROFESSIONAL EXPERIENCE

Associate Software Engineer 2 – AI & Full Stack

Feb 2025 – Present

Publicis Sapient — Client: Capital Group (USA) — Bengaluru, India

- Architected and optimized a scalable microservices ecosystem improving performance, resilience, and fault tolerance across distributed services.
- Designed and developed core services including Loading-Batch, Staging-Batch, Rating-Batch, Loading-Service, Staging-Service, and Helper-Service to streamline financial workflows.
- Integrated Generative AI capabilities using Python and FastAPI to build intelligent services for automated summarization, response generation, and structured data insights extraction.
- Developed REST-based AI microservices consuming LLM APIs and implemented domain-specific prompt engineering strategies.
- Implemented Kafka-based asynchronous processing for AI pipelines supporting real-time ingestion and inference workloads.
- Improved system efficiency by automating AI-driven workflows and reducing manual intervention.

Senior Software Engineer – AI & Java Full Stack

2024 – 2025

Mirafr Technologies (Client: Cisco Systems, USA), Bangalore

- Developed scalable Java Spring Boot microservices for Cisco Security Intelligence and AI-driven network automation handling 20K+ requests/day.
- Built full-stack security dashboards using React.js and REST APIs for real-time threat monitoring, firewall analytics, and RBAC-based access control.
- Implemented event-driven architecture with Kafka and Redis caching to improve telemetry streaming and reduce latency by 40%.
- Integrated Generative AI (LLM APIs) for automated incident summarization, log analysis, and AI-powered network support chatbot.
- Deployed containerized services using Docker and Kubernetes with CI/CD pipelines, ensuring high availability and 80%+ test coverage.

Software Engineer – MERN Stack Developer

2022 – 2024

Chetu India Pvt. Ltd. (Client: PowerGrid Services, India), Noida

- Developed scalable full-stack applications using MERN (MongoDB, Express.js, React.js, Node.js) for enterprise monitoring systems.
- Designed RESTful APIs and optimized MongoDB queries, improving application performance by 30%.
- Implemented JWT-based authentication and RBAC, ensuring secure and role-based access control.
- Built responsive React.js UI with Redux for state management and reusable component architecture.

KEY PROJECTS

AI-Driven E-Commerce Platform

- Built AI-powered product recommendation engine using embeddings and similarity scoring.
- Implemented personalized product ranking based on user behavior and search history.
- Designed Spring Boot backend with microservices architecture for order, cart, and recommendation modules.
- Developed React.js frontend with dynamic recommendation components.
- Increased user engagement by 32% through personalized recommendations.

Enterprise GenAI Chatbot

- Built contextual AI chatbot using OpenAI, LangChain, and vector database.
- Implemented RAG-based semantic search architecture.
- Deployed on AWS ECS with auto-scaling.
- Increased knowledge retrieval accuracy by 38%.

AI-Based Resume Ranking System

- Developed NLP-based similarity scoring engine using embeddings.
- Reduced recruiter screening time by 40%.

EDUCATION

Bachelor of Technology – Electronics And Communication Engineering

KEY ACHIEVEMENTS

- Reduced infrastructure cost by 20% through AWS optimization.
- Led AI proof-of-concept to full production deployment.
- Mentored junior engineers in AI and full stack development.
